

Aliso Canyon Storage Withdrawal Capacity

If called upon to support system reliability, Aliso Canyon's withdrawal capacity of 1317 MMcfd, as stated in our Winter 2018-19 Technical Assessment, is currently reduced. In addition to reductions due to current inventory levels at the facility, as of February 1, 2019, unplanned repairs of an aboveground pipeline leading to Dehydration Unit 1 has further reduced Aliso Canyon's withdrawal capability by approximately 420 MMcfd. The Dehydration 1 Unit return to service date is yet to be determined. SoCalGas is working diligently to restore Aliso Canyon's withdrawal capabilities.
