

SoCalGas Electric Generation Curtailment

Due to forecasted low temperatures and expected high customer demand, SoCalGas is issuing a curtailment for electric generation customers on the SoCalGas system, in accordance with Rule 23, effective 12:00 AM PCT, February 6, 2019. During this curtailment, electric generation customers will be curtailed based on current day-ahead demand forecasts and weather conditions in coordination with the Balancing Authorities. This curtailment will continue until further notice.

System conditions remain dynamic and are subject to change. Until further notice, a system-wide curtailment watch for both SoCalGas and SDG&E will remain in effect for all other noncore customers. Customers are advised that they may be receiving a notice to curtail service.

Customers should continue to monitor ENVOY at <https://scgenvoy.sempra.com> for further updates.

Please contact your Account Manager if you have any questions.
